

Covid-19 Vaccination for Children

Hundreds of doctors and scientists, many of whom strongly support the adult vaccine, are calling for a stop to vaccinating all children for Covid-19.

They say there are no benefits and considerable risks.

1. No previously healthy children have died of Covid-19 (C19) in the UK and the chances of a child dying of C19 have been shown in the UK and USA to be statistically zero. Children are far more likely to die from car accidents, drowning, cancer, suicide and influenza, amongst other things.

2. There is no need to mass vaccinate children to protect others:

- Vulnerable children can already access vaccination.
- Healthy children passing coronaviruses to each other will simply boost their naturally acquired immunity, to the benefit of us all.
- Adults get protection from vaccination or their own natural immunity.
- Recent modelling suggests that the UK has reached herd immunity.

3. Young people are already suffering C19 vaccine injuries and deaths:

- 80% of 12–15 year olds in the Pfizer trials suffered side-effects such as fever, fatigue, headache, vomiting, diarrhoea and muscle pain.
- 4 deaths and 4,740 adverse events were reported for 12–17 year olds between 14th December 2020 and 28th May 2021 in the USA.
- These figures included 40 reports of heart inflammation attributed to the Pfizer vaccine. While the US injuries are still to be investigated, health officials found a probable link between the Pfizer vaccine and dozens of cases of heart inflammation in young men in Israel.

4. There is no long-term safety data on the C19 vaccines, despite the fact that it can take years for vaccine injuries to manifest. Deaths associated with C19 vaccinations continue to rise: 1,253 in the UK, 5,165 in the USA, and 10,570 in Europe, with hundreds of thousands of injuries (as of May 2021). Research shows that even these figures are likely to be a gross underestimate.

5. Infertility is a possible risk after C19 vaccines, with thousands of reports of reproductive disorders, such as menstrual irregularities, miscarriages, still births, vaginal haemorrhaging, erectile dysfunction and testicular pain.

6. Pharmaceutical companies have no liability for C19 vaccine injuries or deaths; meanwhile, the “Vaccinate the World” agenda is obscuring the many reasons why mass vaccination of children is irresponsible and unnecessary.

This is an experiment with our children’s health. Are we willing to risk their well-being? Their fertility? Even their lives?
